A CRM APPLICATION FOR BANQUET HALL BOOKING

User Story:

Banquet hall booking is the process of securing a venue for hosting events such as weddings, corporate gatherings, birthday parties, and other special occasions. It typically begins when a client checks whether the hall is available for a particular date and event type. The client then provides information such as the event date, expected number of guests, preferred arrangement, catering requirements, and any additional requests.

Based on these details, the venue prepares a proposal that outlines the available packages, pricing, services, and facilities provided. Once the reservation is confirmed, the event coordinator works closely with the client to plan and manage all aspects of the event. This includes finalizing seating layouts, menu selections, decoration themes, audiovisual arrangements, and other specific requirements.

On the day of the event, the banquet hall staff ensure that everything is executed smoothly, handle any unexpected issues, and assist both the client and guests to ensure the event is successful.

Project Overview:

This project focuses on developing a comprehensive booking management system for a banquet hall business using Salesforce, aimed at streamlining and automating the booking process, managing event details efficiently, and providing insights into sales and revenue. The system will also include features for handling catering and menu selection, DJ services, decorations, wedding themes, and other marriage-related services. Additionally, automated workflows will be implemented to ensure data accuracy, maintain smooth operations, and prevent issues such as double bookings.

Project Flow:

Milestone 1: Creation of developer account

Milestone 2: Object Creation

Milestone 3: Tabs

Milestone 4: The Lightning App

Milestone 5: Fields

Milestone 6: Creation of Page Layout

Milestone 7: Creation of Record Types

Milestone 8: Validation rules

Milestone 9: Flows

Milestone 10: Triggers

Milestone 11: Reports

Milestone 12: Dashboards

Milestone 13: Conclusion

Introduction:

Are you new to Salesforce? Unsure what it is, how it works, or where to start learning? If so, you're in the right place. This module is designed just for beginners like you.

Welcome to Salesforce! This powerful platform offers a variety of tools that help you work smarter and faster. As you progress through this module and earn your badge, we'll explore its features and answer the question: "What exactly is Salesforce?"

What Is Salesforce?

Salesforce is a customer success platform that helps you sell, provide service, market, analyze, and connect with your customers. It provides everything you need to manage your business from anywhere. Using Salesforce's standard products and features, you can:

- Manage relationships with prospects and customers
- Collaborate and engage with employees and partners
- Securely store your data in the cloud

Before Salesforce, your contacts, emails, tasks, and deals might have been scattered across spreadsheets, emails, or other tools—making it harder to keep everything organized. Salesforce brings all of this together in one place, streamlining your work and improving productivity.

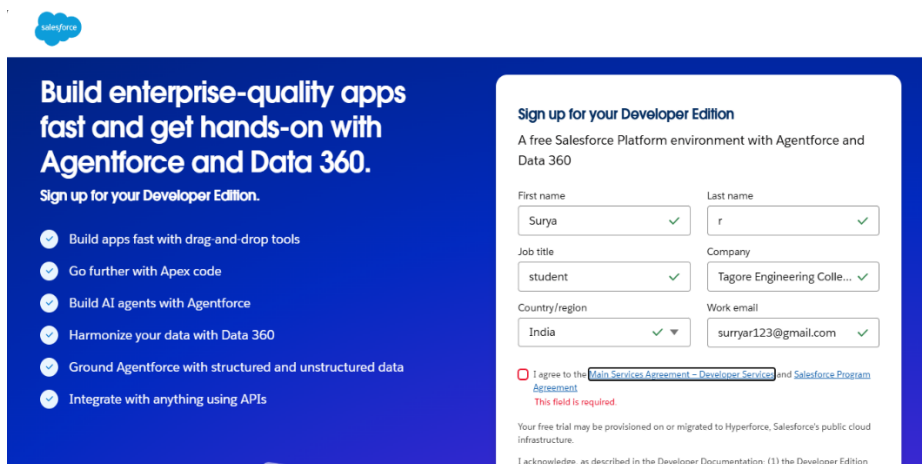

Check out this introductory video to see Salesforce in action: <https://youtu.be/r9EX3lGde5k>

Milestone 1: Creation of developer account

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign-up form, enter the following details:

The screenshot shows the Salesforce Developer Edition sign-up page. On the left, a blue banner with the Salesforce logo says "Build enterprise-quality apps fast and get hands-on with Agentforce and Data 360." Below this, it says "Sign up for your Developer Edition." and lists six benefits: "Build apps fast with drag-and-drop tools", "Go further with Apex code", "Build AI agents with Agentforce", "Harmonize your data with Data 360", "Ground Agentforce with structured and unstructured data", and "Integrate with anything using APIs". On the right, the "Sign up for your Developer Edition" form is displayed. It includes fields for First name (Surya), Last name (r), Job title (student), Company (Tagore Engineering Colle...), Country/region (India), and Work email (surryar123@gmail.com). Each field has a green checkmark indicating it is valid. Below the form, there is a checkbox for "I agree to the Main Services Agreement – Developer Services and Salesforce Program Agreement" with a note "This field is required." and a disclaimer: "Your free trial may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure." At the bottom, it says "I acknowledge, as described in the Developer Documentation: (1) the Developer Edition".

- 1) First name & Last name
- 2) Email
- 3) Role: Developer
- 4) Company: College Name
- 5) Country: India
- 6) Postal Code: pin code
- 7) Username: should be a combination of your name and company

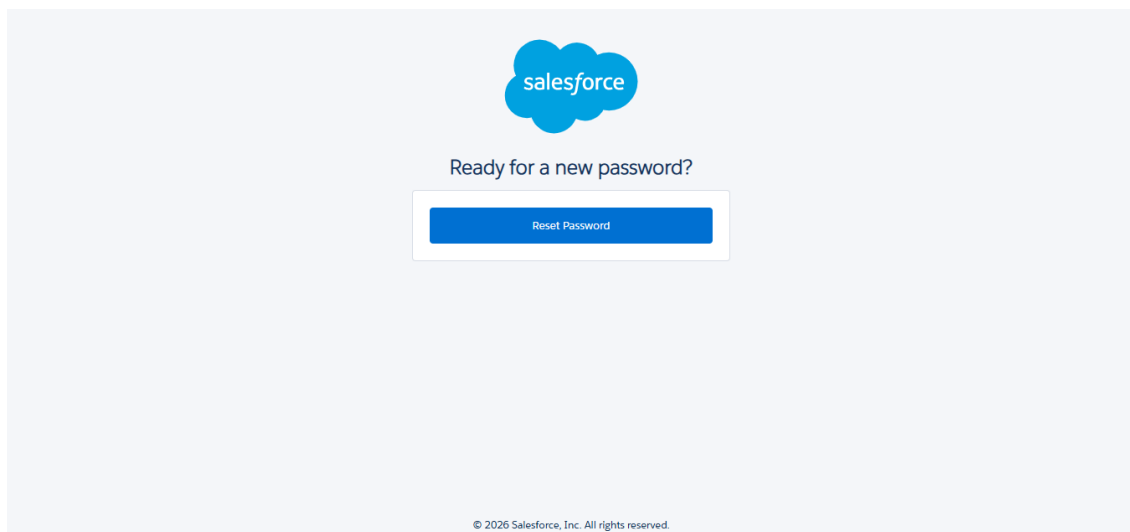

This need not be an actual email id, you can give anything in the format:

username@organization.com

Click on sign me up after filling these.

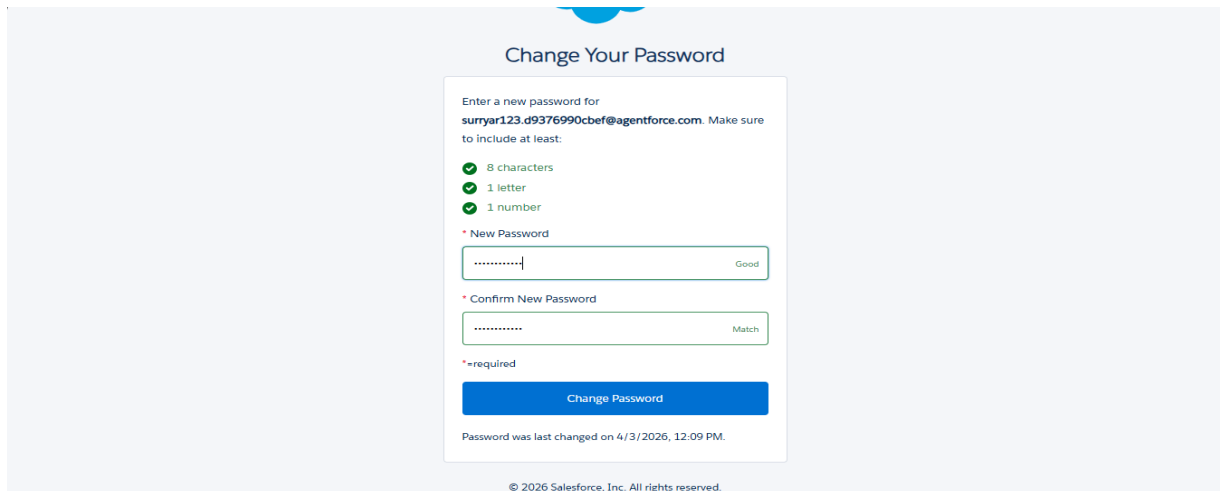

Activity 2: Account Activation:

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

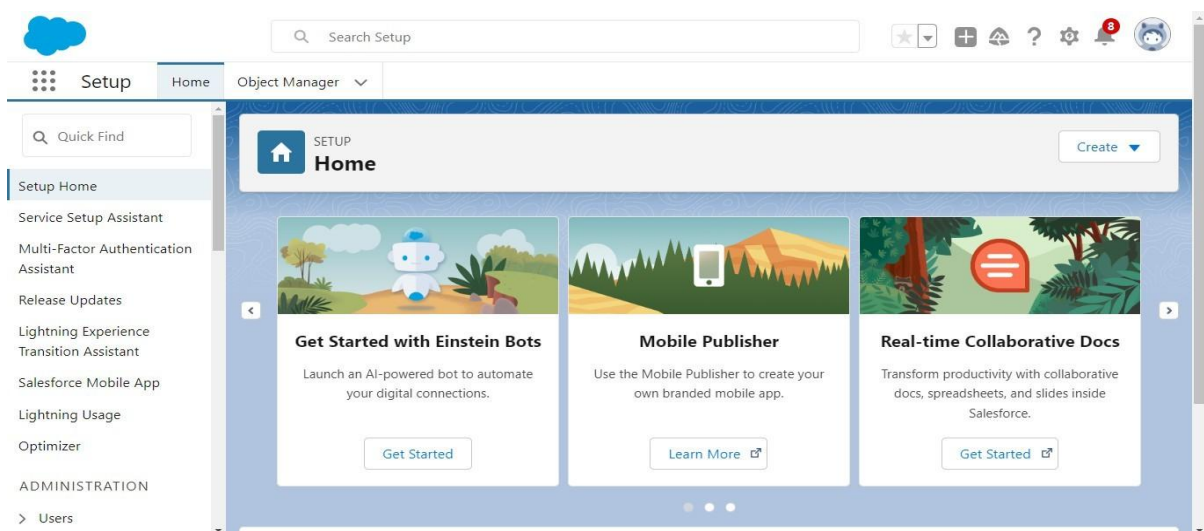

1. Click on Verify Account

2. Give a password and answer a security question and click on change password.

The image shows a 'Change Your Password' form in a Salesforce interface. The form is titled 'Change Your Password' and is set for the user 'suryar123.d9376990cbef@agentforce.com'. It includes a password strength indicator with three green checkmarks: '8 characters', '1 letter', and '1 number'. There are two input fields: '* New Password' and '* Confirm New Password'. The 'New Password' field has a 'Good' status, and the 'Confirm New Password' field has a 'Match' status. A blue 'Change Password' button is at the bottom. Below the button, it says 'Password was last changed on 4/3/2026, 12:09 PM.' and a copyright notice '© 2026 Salesforce, Inc. All rights reserved.'

3. Then you will redirect to your salesforce setup page.

Milestone 2- Object

Activity 1: Creating a Banquet Hall Object

The purpose of creating a Banquet Hall custom object is to store and manage information about Banquet Hall Bookings.

To create an object:

1. From the setup page
2. Click on Object Manager
3. Click on Create → Click on Custom Object.
4. Enter the label name→ Banquet Hall
5. Enter Plural label name→ Banquet Halls
6. Enter Record Name → Customer Name
7. Select Data Type as Text.
8. Select Allow reports.
9. Select Allow search.
10. Click on Save and New

The screenshot shows the Salesforce 'New Custom Object' setup page. The page title is 'New Custom Object'. Below the title, there is a message: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Test one record](#) [Don't show this message again](#)'. The main section is 'Custom Object Definition Edit', which includes a 'Custom Object Information' tab. The 'Custom Object Information' section contains the following fields and options:

- Label:** Banquet Hall (Example: Account)
- Plural Label:** Banquet Halls (Example: Accounts)
- Starts with vowel sound:** ☐
- Object Name:** Banquet_Hall (Example: Account)
- Description:** (Empty text area)
- Context-sensitive help setting:** ☒ Open the standard Salesforce.com Help & Training window ☐ Open a window using a Visualforce page
- Content name:**

At the bottom of the page, there is a section titled 'Enter Record Name Label and Format'.

In the same way Create Billing and Staff objects.

For the Billing object, select Auto Number as Data type for the Billing No Standard field with the format BILL - {0000}.

For the Staff object, select Data type as Text for Staff Name as Standard field.

The screenshot displays the 'New Custom Object' configuration page in Salesforce. At the top, there's a navigation bar with 'Setup' and 'Object Manager' tabs. Below this, a header bar reads 'New Custom Object'. A yellow message bar states: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Tell me more!](#) [Don't show this message again](#)'. The main section is titled 'Custom Object Definition Edit' and includes 'Save', 'Save & New', and 'Cancel' buttons. Under 'Custom Object Information', there's a note: 'The singular and plural labels are used in tabs, page layouts, and reports.' The 'Label' field is 'Billing' (Example: Account), and the 'Plural Label' is 'Billings' (Example: Accounts). There's an unchecked checkbox for 'Starts with vowel sound'. The 'Object Name' is 'Billing' (Example: Account), and the 'Description' field is empty. At the bottom, the 'Context-Sensitive Help Setting' is set to 'Open the standard Salesforce.com Help & Training window', and the 'Content Name' is '--None--'. A footer bar prompts to 'Enter Record Name Label and Format'.

Milestone 3- Tabs

What is Tab: A tab is like a user interface that is used to build records for objects and to view the records in the objects.

Activity 1: Creating a tab for Banquet Hall Object

1. Go to the setup page → type Tabs in Quick Find bar
2. Click on tabs
3. Click on New (under custom object tab).
4. Select Object (Banquet Hall) → Select the tab style
5. Click on Next → (Add to profiles page) keep it as default → Click on Next (Add to Custom App) uncheck the include tab.
6. Make sure that the Append tab to users' existing personal customizations is checked.

The screenshot shows the Salesforce Setup interface. The left sidebar has a search bar with 'tabs' entered. Under 'User Interface', 'Rename Tabs and Labels' is selected, and 'Tabs' is highlighted. The main content area is titled 'Edit Custom Object Tab Banquet Halls'. Below this, it says 'Fill in the fields below to define the custom tab.' The 'Custom Tab Definition Edit' section has a 'Custom Object Tab Information' sub-section. It shows 'Tab Label' as 'Banquet Halls', 'Object' as 'Banquet Hall', and 'Tab Style' as 'My Site'. There is a note: '(Optional) Choose a Home Page Custom Link to show as a splash page the first time your users click on this tab.' The 'Splash Page Custom Link' is set to '--None--'. There is a 'Description' field with a text area. At the bottom are 'Save' and 'Cancel' buttons.

The screenshot shows the Salesforce Setup interface for creating a custom tab for 'Billings'. The left sidebar is the same as the previous screenshot. The main content area is titled 'Edit Custom Object Tab Billings'. Below this, it says 'Fill in the fields below to define the custom tab.' The 'Custom Tab Definition Edit' section has a 'Custom Object Tab Information' sub-section. It shows 'Tab Label' as 'Billings', 'Object' as 'Billings', and 'Tab Style' as 'Anyplace'. There is a note: '(Optional) Choose a Home Page Custom Link to show as a splash page the first time your users click on this tab.' The 'Splash Page Custom Link' is set to '--None--'. There is a 'Description' field with a text area. At the bottom are 'Save' and 'Cancel' buttons.

7. Click save
8. Create billing and staff tabs in same way

Milestone 4- The Lightning App

Activity 1: Create a Lightning App for Banquet Hall Booking

1. From Setup, enter App Manager in the Quick Find and select App Manager.
2. Click New Lightning App.
3. Enter **Banquet Hall Booking** as the App Name, then click next
4. Under App Options, leave the default selections and click next.
5. Under Utility Items, leave as is and click Next.
6. From Available Items, select **Banquet Halls, Billings, Staff, Reports, and Dashboards** and move them to Selected Item and Click Next.
7. From Available Profiles, select System Administrator and move it to Selected Profiles.
8. Click Save & Finish.

New Lightning App

	Kolatham Amount	Formula	
	Total Amount	Formula	
Staff	Staff Name (Standard)	Text	Yes
	Position	Text	
	Salary	Currency	
	Phone No	Phone	
	Date of Joining	Date	

Activity 1: Creating a PickList Field in Banquet Hall

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Picklist” and click Next.
5. Enter Field Label as “Timings”.
6. In values select “Enter values (Morning, Evening), with each value separated by a new line" and enter values as shown below.
7. Select Required, always require a value in this field in order to save a record.
8. Click on Next, Next and Save.

The screenshot shows the Salesforce Setup interface for creating a new custom field for the 'Banquet Hall' object. The 'Fields & Relationships' section is active, and the 'New Custom Field' wizard is in progress. The current step is 'Step 2: Enter the details'. The 'Field Label' is set to 'Timings'. Under the 'Values' section, the option 'Enter values, with each value separated by a new line' is selected, and the text 'Morning' and 'Evening' is entered in the text area. The 'Field Name' is set to 'Timings'. The 'Restrict picklist to the values defined in the value set' checkbox is checked. The 'Description' field is empty.

Activity 2: Creating a Date Field in Booking Hall object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Date” and click Next.
5. Enter Field Label as “Booking Date”.
6. Select Required, always require a value in this field in order to save a record.
7. Click on Next, Next and Save.

Developer Edition

Search Setup

Setup Home Object Manager

SETUP > OBJECT MANAGER
Banquet Hall

Banquet Hall
New Custom Field

Step 2 of 4: Enter the details

Field Label: Booking Date

Field Name: Booking_Date

Description: the date the event to be happening

Help Text:

Required: ☒ Always require a value in this field in order to save a record

Auto add to custom report type: ☒ Add this field to existing custom report types that contain this entity

Default Value: Show Formula Editor

Use formula syntax: Enclose text and picklist value API names in double quotes ("the_text"), include numbers without quotes (25), show percentages as decimals (0.10), and express date calculations in the standard format (Today() + 7). To reference a field from a Custom Metadata type record use: \$CustomMetadata.Type__mdcRecordFieldName.Field__c

Previous Next Cancel

Einstein

Activity 3: Creating a Number Field in Banquet Hall object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Number” and click Next.
5. Enter Field Label as “No of Visitors”.
6. Length - 18, Decimal Places - 0.
7. Select Required, always require a value in this field in order to save a record.
8. Click on Next, Next and Save.

The screenshot shows the Salesforce Setup interface for creating a new custom field for the 'Banquet Hall' object. The 'Fields & Relationships' tab is selected in the left sidebar. The 'New Custom Field' wizard is in progress, specifically at 'Step 2. Enter the details'. The 'Field Label' is 'Timings'. The 'Values' section shows a list of values: 'Morning' and 'Evening'. The 'Field Name' is 'Timings'. The 'Description' field is empty. The 'Help Text' field is empty. The 'Restrict picklist to the values defined in the value set' checkbox is checked. The 'Display values alphabetically, not in the order entered' checkbox is unchecked. The 'Use first value as default value' checkbox is unchecked. The 'Use global picklist value set' radio button is selected. The 'Enter values, with each value separated by a new line' radio button is selected. The 'Previous', 'Next', and 'Cancel' buttons are visible at the top right of the wizard.

Activity 4: Creating Master Detail Relationship

A Master Detail relationship is a type of relationship in Salesforce that connects two objects together based on a field known as the Lookup field. It establishes a relationship between a child object and a parent object, allowing the child object to reference the parent object.

To Create a relationship between Banquet Hall & Billing Objects.

1. Go to the Setup page → click on Object manager → type object name (Billing) in the quick find bar → click on the object.
2. Click on fields & relationship
3. Click on New.
4. Select “Master Detail relationship” as data type and click Next.
5. Select the related object “Banquet Hall”.
6. Click on Next
7. Give Field Label as “Customer Name”.

The screenshot shows the Salesforce Setup interface. The left sidebar contains a menu with options like Details, Fields & Relationships, Page Layouts, etc. The main content area is titled 'Banquet Hall' and 'New Relationship'. It displays 'Step 3. Enter the label and name for the lookup field'. The form includes fields for 'Field Label' (set to 'Customer Name'), 'Field Name' (set to 'Customer Name'), 'Description', and 'Help Text'. Below these, there are 'Child Relationship Name' (set to 'Banquet_Halls') and 'Sharing setting' options. The 'Read/Write' option is selected. At the bottom, there are checkboxes for 'Allow reparenting' and 'Add this field to existing custom report types that contain this entity', both of which are checked.

8. Click on Next → Next → Next → Save.

Activity 5: Creating a Checkbox Field in Banquet Hall object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Checkbox” and click Next.
5. Enter Field Label as “DJ”.
6. Select Default value: Unchecked.
7. Click on Next, Next and Save.

The screenshot shows the Salesforce Setup interface in the 'Developer Edition'. The 'Object Manager' tab is selected, and the 'Banquet Hall' object is chosen. The 'Fields & Relationships' section is active, and the 'New Custom Field' wizard is open. The wizard is at Step 2 of 4, 'Enter the details'. The field label is 'DJ', the default value is 'Unchecked', and the description is 'checkbox box to know whether the DJ is required for the event or not'. The 'Add this field to existing custom report types that contain this entity' checkbox is checked.

Activity 6: Creating a Phone Field in Banquet Hall object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Phone” and click Next.
5. Enter Field Label as “Phone No”.
6. Click on Next, Next and Save.

The screenshot shows the Salesforce Setup interface in the 'Developer Edition' tab. The 'Object Manager' is selected, and the 'Banquet Hall' object is chosen. The 'Fields & Relationships' section is active, and the 'New Custom Field' wizard is open. The wizard is at 'Step 2: Enter the details'. The 'Field Label' is 'Phone No', the 'Field Name' is 'Phone_No', and the 'Description' is empty. The 'Help Text' is also empty. The 'Required' checkbox is unchecked, and the 'Auto add to custom report type' checkbox is checked. The 'Default Value' is empty, and the 'Show Formula Editor' button is visible. The wizard has 'Previous', 'Next', and 'Cancel' buttons. The 'Banquet Hall' object is selected in the left sidebar.

Activity 7: Creating a Archestra Amount Formula Field in Billing object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Billing) in quick find box → click on the Billing object.
2. Now click on “Fields & Relationships”

3. Click on New.
4. Select Data type as “Formula” and click Next.
5. Enter field label Archestra Amount
6. Select formula return type Currency, Click Next
7. Create and insert Advance formula: **IF (Customer_Name__r.Archestra__c = TRUE, 50000, 0)**
8. Click Next, Next, then Save.

The screenshot shows the Salesforce Developer Edition interface. The top navigation bar includes 'Developer Edition', a search bar, and icons for navigation and help. The left sidebar shows the 'Setup' menu with 'Object Manager' selected. The main content area is titled 'Billing' and shows the 'New Custom Field' setup. The 'Field Label' is 'Archestra Amount' and the 'Field Name' is 'Archestra_Amount'. The 'Formula Return Type' is set to 'Currency'. The 'Auto add to custom report type' checkbox is checked. The 'Formula Return Type' section lists several options: None Selected, Checkbox, Currency (selected), Date, DateTime, Number, and Percent. Each option has a brief description and an example formula.

Activity 8: Creating a DJ Amount Formula Field in Billing object

1. Go to setup → click on Object Manager → type object name(Billing) in quick find box→ click on the Billing object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Formula” and click Next.
5. Enter field label DJ Amount
6. Select formula return type Currency, Click Next
7. Create and insert Advance formula: **IF(Customer_Name__r.DJ__c = TRUE, 70000, 0)**
8. Click Next, Next, then Save.

The screenshot shows the Salesforce Developer Edition interface. The top navigation bar includes 'Developer Edition', a search bar, and icons for navigation and help. The left sidebar shows the 'Setup' menu with 'Object Manager' selected. The main content area is titled 'Billing' and shows the 'New Custom Field' setup. The 'Field Label' is 'DJ Amount' and the 'Field Name' is 'DJ_Amount'. The 'Formula Return Type' is set to 'Currency'. The 'Auto add to custom report type' checkbox is checked. The 'Formula Return Type' section lists several options: None Selected, Checkbox, Currency (selected), Date, DateTime, Number, and Percent. Each option has a brief description and an example formula.

Activity 9: Creating a Magician Amount Formula Field in Billing object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Billing) in quick find box → click on the Billing object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Formula” and click Next.
5. Enter field label Magician Amount
6. Select formula return type Currency, Click Next
7. Create and insert Advance formula: **IF(Customer_Name__r.Magician__c , 15000, 0)**
8. Click Next, Next, then Save.

Activity 10: Creating a Shehnai and Mridangam Amount Formula Field in Billing object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Billing) in quick find box → click on the Billing object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Formula” and click Next.
5. Enter field label Shehnai and Mridangam Amount
6. Select formula return type Currency, Click Next
7. Create and insert Advance formula:
IF(Customer_Name__r.Shenai_and_Mridangam__c = TRUE, 25000, 0)
8. Click Next, Next, then Save.

Activity 11: Creating a Kolatam Amount Formula Field in Billing object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Billing) in quick find box → click on the Billing object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Formula” and click Next.
5. Enter field label Kolatam Amount.
6. Select formula return type Currency, Click Next.
7. Create and insert Advance formula: **IF(Customer_Name__r.Kolatam__c , 15000, 0)**
8. Click Next, Next, then Save.

Activity 12: Creating a Food Amount per Plate Formula Field in Billing object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Billing) in quick find box → click on the Billing object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Formula” and click Next.
5. Enter field label Food Amount per Plate
6. Select formula return type Currency, Click Next
7. Create and insert Advance formula as follows:
**CASE(Customer_Name__r.Food_Menu__c , 'Veg', 450,
 'Special Veg', 550,
 'Non-Veg', 550, 650)**
8. Click Next, Next, then Save.

Activity 13: Creating a Food Amount Formula Field in Billing object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name (Billing) in quick find box → click on the Billing object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Formula” and click Next.
5. Enter field label Food Amount.

6. Select formula return type Currency, Click Next
7. Create and insert Advance formula: **Food_Amount_per_Plate_c * Customer_Name_r.No_of_Visitors_c**
8. Click Next, Next, then Save.

Activity 14: Creating a Decoration Amount Formula Field in Billing object

To create fields in an object:

1. Go to setup → click on Object Manager → type object name(Billing) in quick find box→ click on the Billing object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Formula” and click Next.
5. Enter field label Decoration Amount
6. Select formula return type Currency, Click Next
7. Create and insert Advance formula:
CASE(Customer_Name_r.Decoration_Purpose_c , 'Marriage', 50000, 'Reception', 60000, 'Anniversary', 30000, 'Birthday', 25000 , 'Other Events', 20000 , 0)
8. Click Next, Next, then Save.

Activity 15: Creating a Email Field in Banquet Hall object

To create fields in an object:

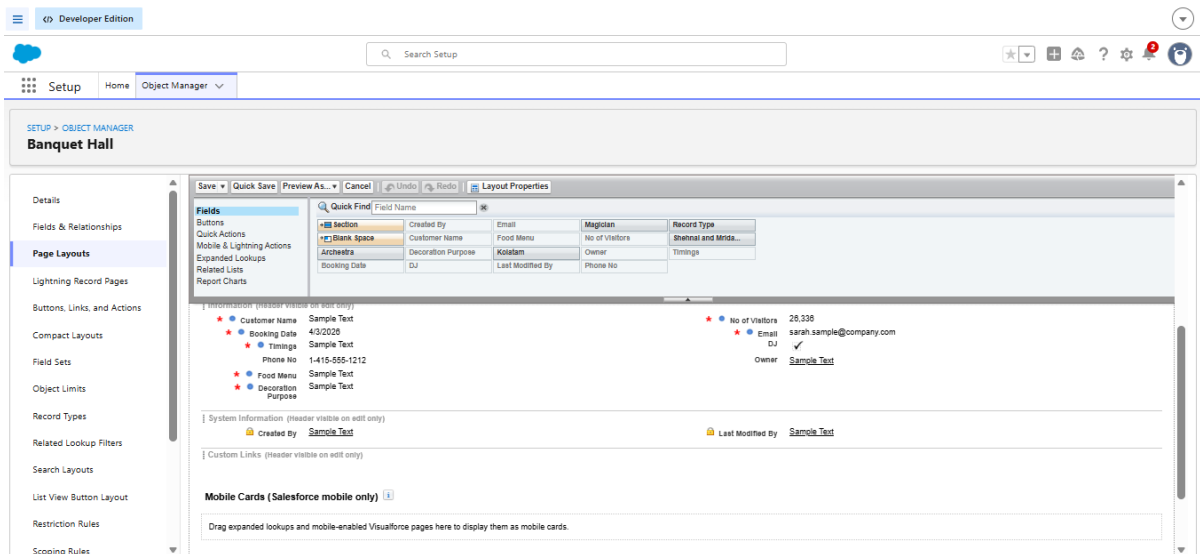

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box→ click on the Banquet Hall object.
2. Now click on “Fields & Relationships”
3. Click on New.
4. Select Data type as “Email” and click Next.
5. Enter the Field Label as “ Email”.
6. Select Required
7. Click on Next, Next and Save.

Milestone 6 - Creation of Page Layouts

Here we have to create Two(2) Page Layouts (Official Booking, Celebrations)

Activity 1: To create a Page Layout in Banquet Hall Object for Official Booking

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object.
2. Click on the Page Layouts
3. Click on New.
4. Enter details as
 - Existing Page Layout : Select Banquet Hall Layout
 - Page Layout Name :Official Booking
 - Click on Save
5. Drag and Arrange the field as shown below

6. Click Save.

Activity 2: To create a Page Layout in Banquet Hall Object for Celebrations

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object.
2. Click on the Page Layouts
3. Click on New.
4. Enter details as
 - Existing Page Layout: Select Banquet Hall Layout
 - Page Layout Name: Celebrations
 - Click on Save

The screenshot shows the 'Banquet Hall' object in the 'Object Manager' of a system's 'Developer Edition'. The 'Page Layouts' section is selected in the left sidebar. The main area displays the 'Banquet Hall Detail' form, which includes fields for Customer Name, Phone No, Email, Booking Date, Timings, Decoration Purpose, Food Menu, No of Visitors, and Record Type. The form is currently in 'Edit' mode, and the 'Record Type' is set to 'Celebrations'.

Field Name	Value
Customer Name	Sample Text

5. Drag and arrange the field as shown below
6. Click Save.

Milestone 7 - Creation of Record Types

Activity 1: To create a Record Type for Official Booking in Banquet Hall Object

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object.
2. Click on the Record Types.
3. Click on New.
4. Enter the details: For Record Types
 - ✓ Existing Record Type: Master
 - ✓ Record Type Label: Official Booking
 - ✓ Record Type Name: Official_Booking
 - ✓ Active: Tick checkbox
5. Click on Next

Setup > OBJECT MANAGER
Banquet Hall

New Record Type
Banquet Hall

Step 1 of 2: Enter the details

Enter a name and description for the new record type. The new record type will include all the picklist values from the existing record type selected below. After saving the new record type, you will be able to customize the picklist values.

Record Type

Existing Record Type: Master--

Record Type Label: Official Booking

Record Type Name: Official_Booking

Description:

Active: ☒

Select Make Available to give users assigned to this profile the ability to create and clone records of this record type, or assign this record type to existing records. To make the new record type the default for a profile, select Make Default. Users assigned to this record type can still view and edit records associated with record types not available for their profiles.

Profile Name	Record Types Currently Available	☐ Make Available	☐ Make Default
Analytics Cloud Integration User	Official Booking (Default), Celebrations	☐	☐
Analytics Cloud Security User	Official Booking (Default), Celebrations	☐	☐
Anypoint Integration	Official Booking (Default), Celebrations	☐	☐

6. In Assign Page Layout
 - ✓ Apply one layout to all profiles: Select Official Booking
7. Click on Save

Activity 2: To create a Record Type for Celebrations in Banquet Hall Object

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object.
2. Click on the Record Types.
3. Click on New.
4. Enter the details: For Record Types
 - Existing Record Types: Master
 - Record Type Label: Celebrations
 - Record Type Name: Celebrations
 - Active: Tick checkbox

SETUP > OBJECT MANAGER
Banquet Hall

New Record Type
Banquet Hall

Step 1. Enter the details (Step 1 of 2)

Enter a name and description for the new record type. The new record type will include all the picklist values from the existing record type selected below. After saving the new record type, you will be able to customize the picklist values.

Record Type

Existing Record Type: **Master**

Record Type Label: **Celebrations**

Record Type Name: **Celebrations**

Description:

Active: ☒

Select Make Available to give users assigned to this profile the ability to create and clone records of this record type, or assign this record type to existing records. To make the new record type the default for a profile, select Make Default. Users assigned to this record type can still view and edit records associated with record types not available for their profiles.

Profile Name	Record Types Currently Available	Make Available	Make Default
Analytics Cloud Integration User	Official Booking (Default) Celebrations	☐	☐
Analytics Cloud Security User	Official Booking (Default) Celebrations	☐	☐
Anypoint Integration	Official Booking (Default) Celebrations	☐	☐
Platform External User	Official Booking (Default) Celebrations	☐	☐

5. Click on Next
6. In Assign Page Layout
 - Apply one layout to all profiles: Select Celebrations
7. Click on Save

Milestone 8 - Validation Rules

Activity 1: To create a validation rule to a Banquet Hall Object

1. Go to setup → click on Object Manager → type object name (Banquet Hall) in quick find box → click on the Banquet Hall object
2. Click on the validation rule → click on New.
3. Enter the Rule name as “BookingDateChecking”.
4. Select Active
5. Insert the Error Condition Formula as: Booking_Date__c <= TODAY()
6. Enter the Error Message as “Booking Date must be a future Date”.
7. Select the Error location as Field and as Booking Date and click Save.

The screenshot shows the Salesforce Setup interface in Developer Edition. The left sidebar contains navigation links: Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, Restriction Rules, and Scoping Rules. The main content area is titled 'Banquet Hall Validation Rule' and includes a 'Help for this Page' link. Below the title is a 'Validation Rule Edit' section with buttons for 'Save', 'Save & New', and 'Cancel'. The 'Rule Name' field is 'BookingDateChecking'. The 'Active' checkbox is checked. The 'Description' field is empty. The 'Error Condition Formula' section includes an example and a 'More Examples...' link. The formula 'Booking_Date__c <= TODAY()' is entered in the formula area. A 'Functions' dropdown menu is open, showing a list of functions including ABS, ACOS, ADDMONTHS, AND, ASCII, and ASIN. The 'Error Message' field is empty. The 'Error Location' is set to 'Field' and the 'Error Location Text' is 'Booking Date'.

Milestone 9 - Flows

Activity 1: Create Flow to check whether the same booking date and timings are already available.

1. Go to setup → type Flow in quick find box → Click on the Flow and Select the New Flow.
2. Select the record Triggered flow. Click on create.
3. Under Object select “Banquet Hall”
4. Select A record is created
5. Set Entry Conditions : None
6. Select Fast Field Updates
7. Under the record trigger flow click on the “+” icon and select **Get Records**.
8. Enter Label as “ Duplicate Checking for Banquet Hall ”.
9. For Object select Banquet Hall
10. For Condition Requirements, select All Conditions are Met (AND)
 - a. For the first condition select as follows:
Field: Booking_Date__c
Operator: Equals
Value: {!\$Record.Booking_Date__c}
 - b. For the second condition select as follows:
Field: Timings__c
Operator: Equals
Value: {!\$Record.Timings__c}
11. For How many Records to store Select **All Records**.
12. For How to Store Record Data select **Choose Automatically Store All Fields**.
13. Click on Do
14. From the Toolbox drag and drop **Decision** element.
15. Enter the Decision label as “Duplicate Checking on Banquet Hall”.

16. For Outcome Details:

- Label: BookingSlotChecking
- Outcome API Name: BookingSlotChecking
- Condition Requirements to Execute Outcome: All Conditions are Met (AND)
- Resource: {!Duplicate_Checking_for_Banquet_Hall}
- Operator: Is Null
- Value: {!\$GlobalConstant.False}

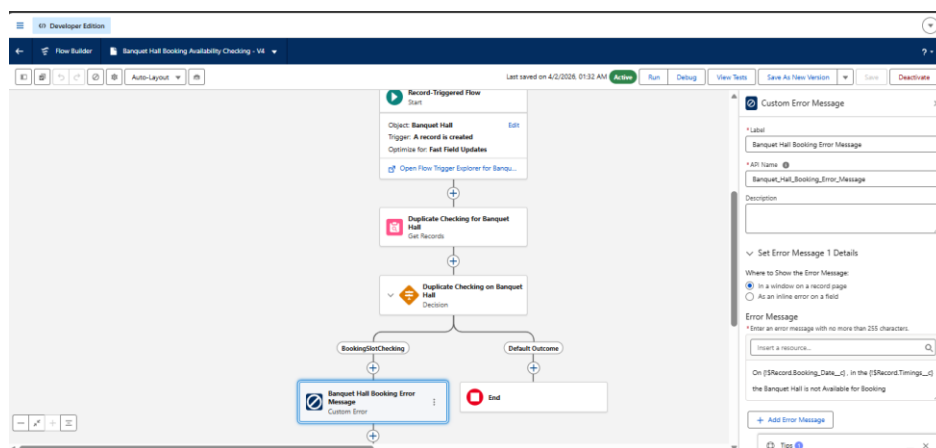

17. Click Done

18. From the Toolbox drag and drop **Custom Error Message** element.

19. Enter the label as “Banquet Hall Booking Error Message”.

20. For Where to Show the Error Message: Select In a window on a record page

21. Error Message: On {!\$Record.Booking_Date__c} , in the {!
\$Record.Timings__c} the Banquet Hall is not Available for Booking

22. Click Done

23. Save the flow as “Banquet Hall Booking Availability Checking”

24. Activate the flow.

Milestone 10 - Triggers

Activity 1 : Create a Trigger for Automated Billing Creation upon Banquet Hall Creation

Step 1:

Login to Salesforce:

Log in to your Salesforce account with administrative privileges.

Step 2:

- i) Navigate to Setup: Once logged in, click on the gear icon  (Setup) located at the top-right corner of the page. This will open the Setup menu.
- ii) Click on Developer Console: Click on the "Developer Console" option from the Setup menu. This will open the Developer Console in a new browser tab or window.

Step 3:

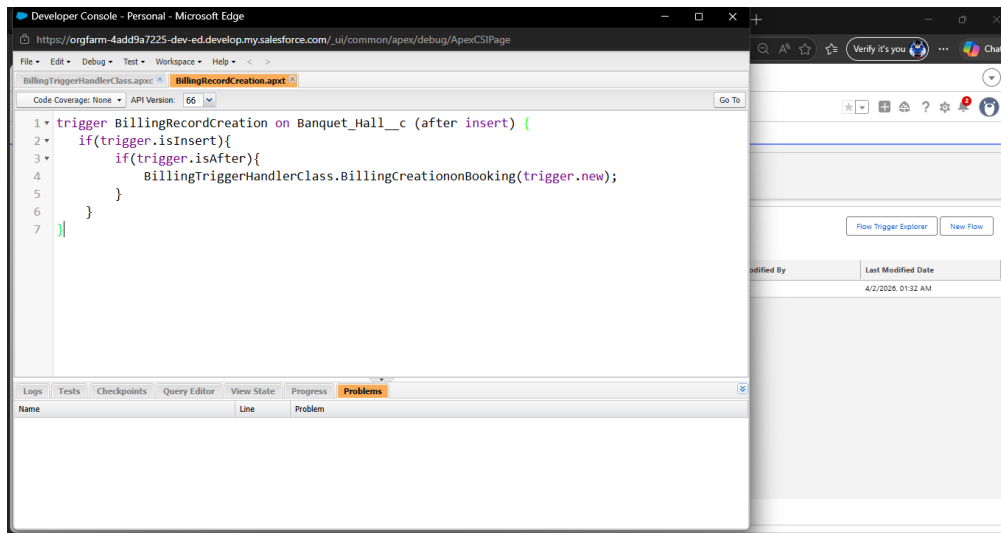

- 1) In the Developer Console window, go to the top menu and click on "File".
- 2) Select New: From the dropdown menu under "File", select "New".
- 3) Choose Apex Class: In the submenu that appears, select "Apex Class". This will open a new Apex Class editor tab.

Give Class Name: BillingTriggerHandlerClass

Create an Apex Class:

```
public class BillingTriggerHandlerClass {  
    Public Static Void BillingCreationonBooking(List<Banquet_Hall__c>  
bHallList){  
        List<Billing__c> billList = new List<Billing__c>();  
  
        for(Banquet_Hall__c bHall : bHallList){  
            Billing__c bil = new Billing__c();  
            bil.Customer_Name__c =bHall.Id;  
            bil.Email__c = bHall.Email__c;  
            billList.add(bil);  
        }  
        if(!billList.isEmpty()){  
            insert billList;  
        }  
    }  
}
```

}

Step 4:

- i) In the Developer Console window, go to the top menu and click on "File".
- ii) Select New: From the dropdown menu under "File", select "New".
- iii) Choose Apex Class: In the submenu that appears, select "Apex Trigger". This will open a new Apex Trigger editor tab.

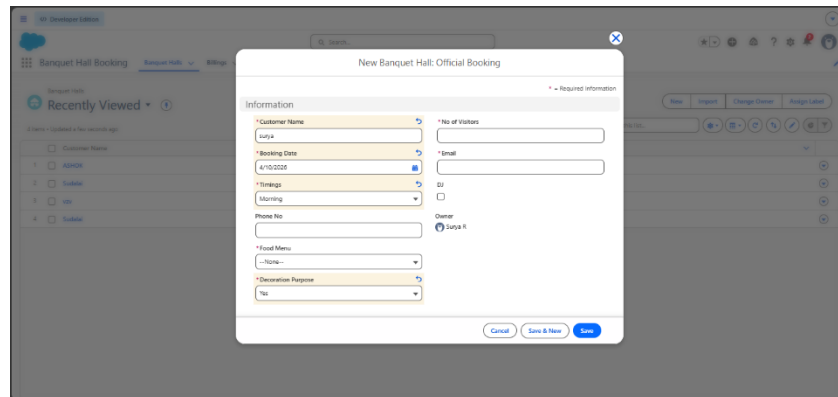

Create an Apex Trigger:

```
trigger BillingRecordCreation on Banquet_Hall__c (after insert) {  
    if(trigger.isInsert){  
        if(trigger.isAfter){  
            BillingTriggerHandlerClass.BillingCreationonBooking(trigger.new);  
        }  
    }  
}
```

Milestone 11 - Reports

Activity 1: Create a Summary Report

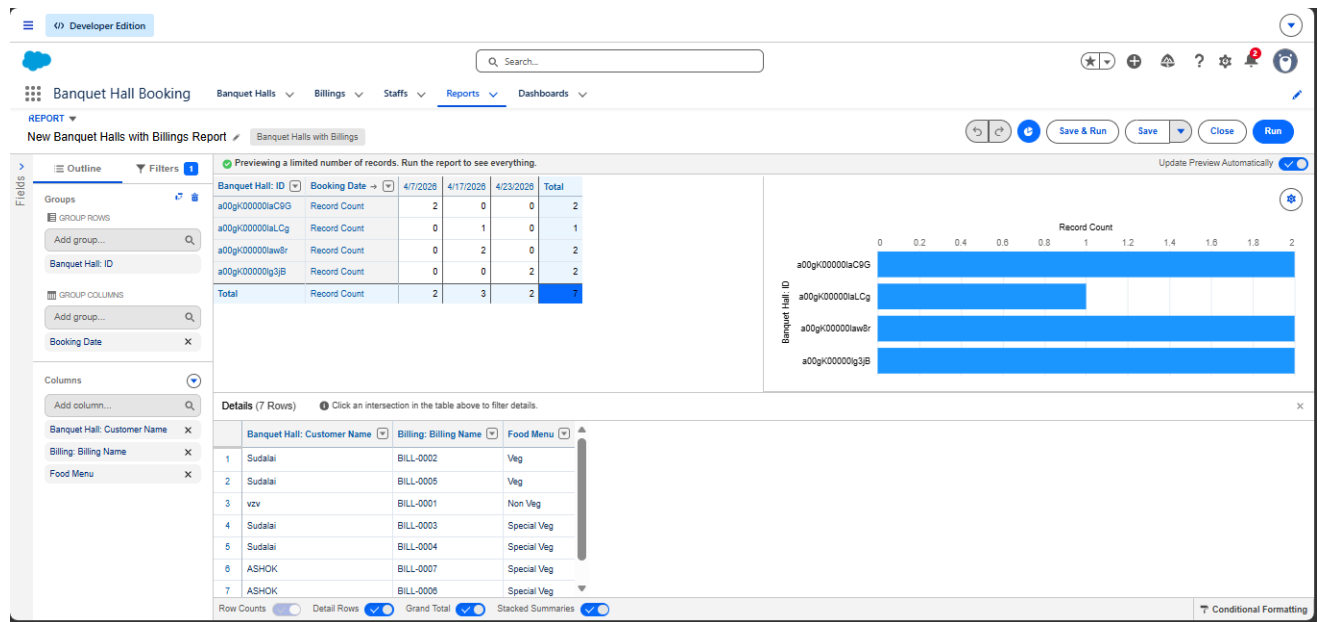

1. Click App Launcher
2. Select **Banquet Hall Booking** App
3. Click Reports tab
4. Click New Report.
5. Click the report type as Banquet Halls with Billings Click **Start report**.

6. Click on Filters and select as follows and click on Apply
7. Customize your report, in group rows select – **Booking Date**, for columns Timings, Total Bill Amount (In this way we are making a Summary Report).
8. Click save and run
9. Give report name – **Banquet Halls with Billings Report**
10. Click Save

NOTE: In this report you can see your all record of the object you selected for reporting

(What you selects in “Select a report type option”)

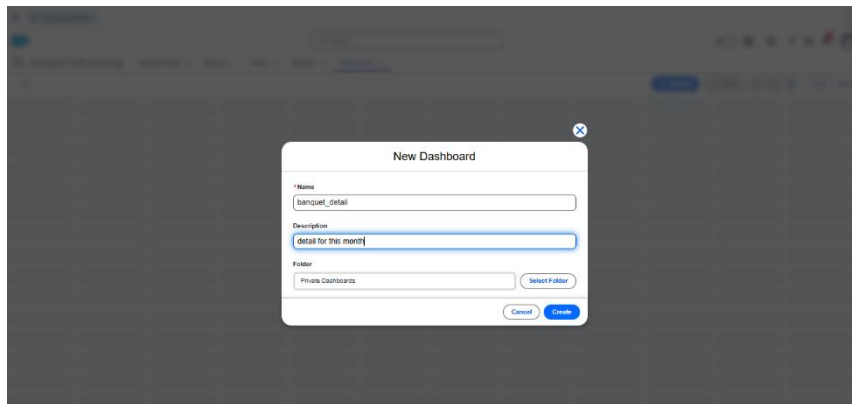

Activity 2: View Report

1. Click on App Launcher on the left side of the screen.
2. Search **Banquet Hall Booking** App & click on it.
3. Click on Reports Tab.

Milestone 12 - Dashboards

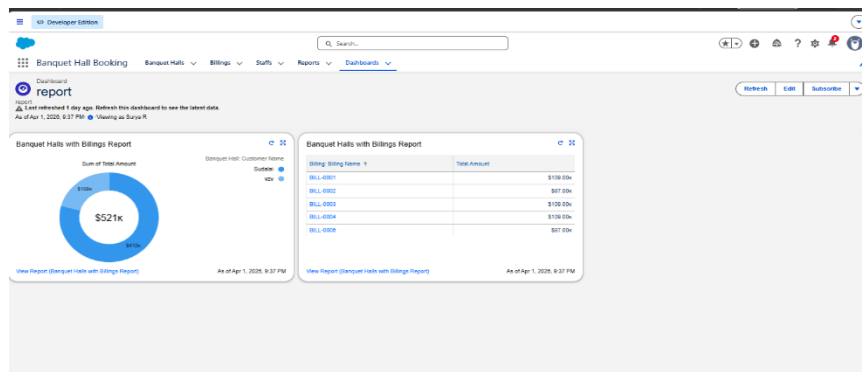

Activity 1: - Create Dashboard

1. Click on the Dashboards tab from the **Banquet Hall Booking** application.
2. Click on the new dashboard.
3. Give name - Total Revenue
4. Click create
5. Give your dashboard a name and click on +widget
6. Select the **Banquet Halls with Billings Report**
7. For the data visualization select any of the charts, tables etc. as per your choice/requirement.
8. Click add.
9. Click save.

Activity 2: View Dashboard

1. Click on App Launcher on the left side of the screen.
2. Search **Banquet Hall Booking** & click on it.
3. Click on Dashboard Tab.
4. Click on **Total Revenue** see graph view of records

Milestone 13 - Conclusion:

By implementing the enhanced Banquet Hall Booking Management System in Salesforce, the venue can offer a seamless experience for clients seeking banquet hall services, catering/menu options, DJ services, decorations, and marriage-related services. This comprehensive solution will streamline operations, enhance customer experience, and drive revenue growth through efficient booking management and personalized service delivery.
